

Muhamed Isabegovic

Technical Lead / AI Product Developer

Product engineer with 10 years across product, backend, frontend and infrastructure, Ruby on Rails underneath. Since 2024 I have run my own company: founded two Ruby conferences and a product, and led engineering at a seed-stage startup through its acquisition by Carv.

Experience

Founder · Isabegovic Muhamed

01/2024 - Present · Vienna, Austria

My own company: engineering roles inside startups, two Ruby conferences, and a product of my own.

Technical Lead · Recrubo, acquired by Carv

Seed-stage AI platform for recruiters, around 10 people when I joined.

- After the acquisition, led the integration of both products: one Vue.js frontend, a shared database for clients and sessions, common ATS integrations, and the Rails, Node/TypeScript on Google Cloud and Flutter stacks brought step by step closer.
- Normalised data from 20+ applicant tracking systems into one model, so AI features worked the same for every client and new integrations plugged into one shape.
- Co-built an event-driven system on Redis Pub/Sub with normalised events, and Google Cloud Tasks as fallback and for workload management.
- Owned delivery with a PM, mentored 10 engineers, and owned DevOps on Google Cloud and CI/CD.

AI Product Developer · Teamtailor, Co-pilot team

ATS serving 8,500+ companies, on Rails and Ember.js.

- Built and shipped screening triggers in the hiring pipeline: screening criteria as a trigger, smart moves of candidates based on the criteria, and requests for missing information. Long-awaited screening upgrades, used extensively by every Co-pilot customer.
- Designed a retrieval-augmented prescreening architecture: staged Sidekiq pipelines, pgvector per tenant, RubyLLM structured outputs and evals, built for the EU AI Act.

Founder and organiser · EuRuKo 2024 and RubyConf Austria 2026

- EuRuKo 2024, Sarajevo: 3 days, 3 tracks, 50 speakers from 25+ countries, 700 attendees.
- RubyConf Austria 2026, Vienna: up to 200 attendees, 13 speakers including Dave Thomas, Chad Fowler, Jose Valim and Armin Ronacher, workshops, 4 concerts, and a community day with a treasure hunt for €3,000 of rubies on hunt.rubyconf.at, an app I built (473 tests).
- Led both end to end, budget and sponsorships included, with a few helpers; took EuRuKo's lessons into RubyConf Austria with a venue chosen to cut risk and an event sized to what I could deliver.

Founder and CTO · Usput.ba

- Rails 8.1 travel guide on RubyLLM, Hotwire and Kamal; content grounded in places retrieved from a places API and its own database, with schema-enforced output.

Senior Software Engineer · Meisterlabs

11/2021 - 12/2024 · Vienna, Austria · Maker of MindMeister and MeisterTask

- Proposed, designed and built a dynamic plans and permissions system across Accounts, MindMeister and MeisterTask, replacing hardcoded feature checks scattered across apps, so product could set up plans and run billing experiments without developer time.
- Built MindMeister product features and ran A/B experiments across markets for three years.
- Split backend and frontend deployments into separate pipelines on Kubernetes, so the frontend team shipped daily, independent of backend releases; maintained and upgraded the cluster setup.

Software Engineering Manager · Experfy

10/2019 - 07/2021 (rejoined; junior engineer 2016 - 2017) · Led a remote team of ~30 engineers across 7 time zones through a 150 percent scale-up.

C++ Software Engineer · Marvelsoft

01/2018 - 09/2019 · Fintech building trading workflow software

Skills

Product and AI

LLM pipelines RAG LLM evaluation
Structured outputs Agent guardrails MCP
A/B experiments

Backend

Ruby on Rails Ruby Node.js TypeScript
Go Python PostgreSQL Redis
Event-driven systems

Frontend and mobile

Hotwire Vue.js Ember.js Flutter

Infrastructure and DevEx

Google Cloud Kubernetes CI/CD Kamal
Architecture testing Technical leadership
Mentoring

Open Source

enola · architectural regression testing

- Core contributor: built the constraints program, declarative architecture rules evaluated over enola's fact graph, deterministic and fail-closed; maintain four Ruby gems around it.

pi-brain · intent store for agentic development

- Author and maintainer: human-gated agent workflows on the pi coding harness; on npm, 9 tagged releases.

Community

Mentor and team lead

BH Futures Foundation · 05/2018 - 09/2021 ·
Certificates of Excellence 2019, 2021

Education

Technical University Vienna

01/2022 - Present · Master student, Software Engineering & Internet Computing, Business Informatics

BSc Information Technology

IPI Akademija Tuzla · 2016 - 2019 · C++ and Qt
